

SMSAlert services offer

SMSAlert APP

from 4.99 EUR / month

Receive or send SMS Messages for Free!

With our APP subscription, you can easily send and receive SMS messages without any additional charges. We provide you with a robust infrastructure to automate SMS messaging using your company phones.

All you need to do is install the SMSAlert app on your Android phones in order to connect to our infrastructure and you can start sending messages through our API or create SMS campaigns effortlessly.

The cost of the messages will be determined by you in negotiations with preferred phone service provider. With this subscription, you can use the application on two phones simultaneously, and SMSAlert will intelligently split the SMS traffic between these two phones to help you save costs.

Moreover, you have the option to purchase more apps as needed or even start sending messages through popular platforms like WhatsApp and Telegram.

It's easy, convenient, and cost-effective – streamline your SMS communication with SMSAlert today!

Included features

- Integrations with different shops or software (Woocommerce, OpenCart, Make, HomeAssistant, Google Sheets, PHP API package).
- Ability to scale SMS messages by increasing the number of apps. Each extra application installed will cost you 2.99 EUR / month extra.
- Ability to use WhatsApp, Telegram or Google RCS in parallel.
- The outbound rules system gives you the ability to split or reroute outbound message traffic between N applications by country/operator or by platform, increasing availability and efficiency.
- Incoming rules system offers you the ability to make decisions based on the received messages, like reacting to messages or saving them to Google Sheets.
- Short URL, in order to keep messages short we offer a service to automatically short URLs and track clicks.

SMSAlert STARTER

from 12.99 EUR / month

Receive or send SMS Messages for Free!

With our STARTER subscription, you can easily send and receive SMS messages without any additional charges. We provide you with a robust infrastructure and GSM equipments to automate SMS messaging using your own SIM card.

You need to sign a contract with SMSAlert for receiving GSM equipment in custody. This connects to our infrastructure via WIFI, after that you are ready to start sending messages through our API or create SMS campaigns effortlessly.

The cost of the messages will be determined by you in negotiations with preferred phone service provider. With this subscription, you receive a single modem in custody, but you can request more based on your message volume.

Moreover, you have the option to purchase addons and send messages through popular platforms like WhatsApp and Telegram.

It's easy, convenient, and cost-effective – streamline your SMS communication with SMSAlert today!

SMSAlert Virtual

from 3 cents / SMS

The simplest of our offers, you do not need a mobile app or dedicated equipment to send SMS messages.

Each SMS is taxed based on the length and destination country. You may want to consult our pricing table.

You can send a maximum of 150 SMS messages per day.

This subscription does not allow you to receive SMS messages in order to engage with your customers, but you can check out our addons to enhance the customer experience with WhatsApp or Telegram Integration.

Addons

You can expand basic SMSAlert functionality with these addons that can be purchased from SMSAlert account shop.

WhatsApp

9.99 EUR / month

Reach more customers with this integration and downsize SMS costs.

You can send primarily messages to WhatsApp and if that number is not available our intelligent outgoing rules system can fallback to SMS.

Or you can send some of the message traffic to WhatsApp automatically and still fallback to SMS if the number is not registered in the application.

Telegram

8.99 EUR / month

Reach more customers with this integration and downsize SMS costs.

You can send primarily messages to Telegram and if that number is not available our intelligent outgoing rules system can fallback to SMS.

Or you can send some of the message traffic to Telegram automatically and still fallback to SMS if the number is not registered in the application.

SMS Fallback

0.99 EUR / month

This addon increases availability for sending SMS messages, in case you are confronted with an outage. SMS Credits are required to be acquired separately.

Monitoring

1.99 EUR / month

This addon will send you SMS notifications if your GSM equipment is down or mobile app, thus increasing your reaction time to recover and fix the issue. 30 Alerts are included each month.
